(57) **ABSTRACT**

A method of manufacturing a display device according to an embodiment of the present disclosure can include placing a mask on an adhesive layer of a display panel and irradiating light thereon, and transferring a plurality of light emitting diodes on a donor onto the display panel. The adhesive layer can be configured by a plurality of first parts overlapping the mask and a second part which is exposed from the mask to be irradiated with light. Further, a light emitting diode alone which is in contact with the plurality of first parts can be transferred onto the display panel.
