A display panel is provided by the present application. The display panel includes a display area and a non-display area. The display panel includes a plurality of power signal lines. Each of the power signal lines includes a power signal input line arranged on the non-display area, a power signal main line and a plurality of power signal sub-lines arranged on the display area. The power signal input line is connected to the power signal main line. At least part of the power signal sub-lines are directly connected to the power signal main line. a width of an input end of the power signal main line is wider than a width each of the power signal sub-lines. The width of the input end of the power signal main line is increased by an embodiment, which can avoid the power signal main line damage due to large current.
