ABSTRACT

This application discloses an SN synchronization method and apparatus for multicast broadcast service, a device, and a readable storage medium. The method includes: obtaining a first radio interface SN of a first multicast broadcast service received in a first cell and a second radio interface SN of the first multicast broadcast service received in a second cell; and sorting data packets of the first multicast broadcast service according to the first radio interface SN and the second radio interface SN; where the first radio interface SN and the second radio interface SN are in a same SN set, and the first radio interface SN and the second radio interface SN are at least partially different.

Obtain a first radio interface SN of a first multicast broadcast service received in a first cell and a second radio interface SN of the first multicast broadcast service received in a second cell

201

Sort data packets of the first multicast broadcast service according to the first radio interface SN and the second radio interface SN
