**ABSTRACT**

The present disclosure relates to an organic light emitting diode and organic light emitting device including the same. The organic light emitting diode includes a first electrode; a second electrode facing the first electrode; and a first emitting part including a first blue emitting layer and a second blue emitting layer and positioned between the first and second electrodes, the second blue emitting layer positioned between the first blue emitting layer and the second electrode and contacting the first blue emitting layer, wherein the first blue emitting layer includes a first host and a first dopant, and the second blue emitting layer includes a second host and a second dopant, wherein each of the first host and the second host is represented by Formula 1, wherein the first dopant is a first compound represented by Formula 3, and the second dopant is a second compound represented by Formula 5.
