(57) **ABSTRACT**  
A display apparatus includes: a substrate including a plurality of sub-pixel areas; an inorganic insulating layer defining a groove between two adjacent sub-pixel areas from among the plurality of sub-pixel areas in a plan view; an organic material layer filled in the groove; and a wiring line disposed on the organic material layer and passing through the two adjacent sub-pixel areas, where the organic material layer includes a first portion overlapping the groove in the plan view and a second portion extending from the first portion in an extension direction of the wiring line.
