(57) **ABSTRACT**

Embodiments of the present disclosure provide methods, apparatus, systems, computer program products for generating an annotation for textual information and/or media content for technical documentation for an item in an interactive electronic technical manual system (IETM) configured to provide electronic and credentialed access to the technical documentation via an IETM viewer. In one embodiment, a method is provided comprising: providing a window for display comprising the textual information and/or media content; receiving input of a selection of an annotation selection mechanism; and responsive to receiving the input: generating the annotation for the textual information and/or media content; receiving an indication of a position in the textual information and/or media content to associate with the annotation; and providing an annotation window for the annotation for display via the IETM viewer, wherein the annotation window comprises an attach file mechanism, a capture mechanism, a share mechanism, and a change form mechanism.
