(57) **ABSTRACT**

A display device may include a substrate including a display area configured to display an image and a non-display area outside the display area, and a plurality of subpixels in the display area. The plurality of subpixels may include a first subpixel of a first color, the first subpixel including a first opening corresponding to a first light emission area and a second opening spaced apart from the first opening and corresponding to a second light emission area. The plurality of subpixels may further include a second subpixel of a second color different from the first color and including a third opening corresponding to a third light emission area.
