ABSTRACT

The present disclosure is an adjustable microwave oven mounting apparatus, suitable for mounting a microwave oven to a wall or to other surfaces and allows a microwave oven to be adjusted vertically and horizontally via a wireless remote control or an internet enhanced device. The disclosure consists of three major segments: a microwave oven mounting segment, an extending/contracting segment, and a wall mounting segment. The microwave oven mounting segment consists of brackets that are attached to the rear of a microwave oven which are then attached to the microwave oven mounting plate. The extending/contracting segment, which is situated between the microwave oven mounting segment and the wall mounting segment, consists of actuators and scissor hinges which allow the disclosure to extend and contract both vertically and horizontally. The wall mounting segment secures the adjustable microwave oven mounting apparatus to a wall or other fixed structures.
