A power converter includes a heat generator configured to generate heat through power conversion, and a case housing the heat generator. The case includes a case member that is made of resin and defines an opening, and a cooler that is made of metal and disposed to cover the opening. The cooler includes a cooling water passage for cooling the heat generator. The case member includes an upper case member that defines an upper opening to be covered by a cover member, and a lower case member that defines the opening covered by the cooler. One of the upper case member and the lower case member has an input side attachment portion to be attached to an input terminal and the other of the upper case member and the lower case member has an output side attachment portion to be attached to an output terminal.
