(57) **ABSTRACT**

The present disclosure provides communication apparatuses and methods for transmitting and/or receiving an aggregated signal, the communication apparatus comprising: circuitry which, in operation, is configured to indicate one or more operating channels of a plurality of operating channels to a group of associated communication apparatuses in which a signal allocated to the group of associated communication apparatuses will be transmitted, and generate a signal allocated to the group of associated communication apparatuses and another signal(s) allocated to another group(s) of associated communication apparatuses; and a transmitter which, in operation, transmits an aggregated signal comprising the signal and the other signal(s) simultaneously.
