**ABSTRACT**

A display apparatus includes: a cover window including a flat-surface area and a bent-surface area bent at a corner of the flat-surface area; a display panel arranged on a surface of the cover window and comprising a front display area and a corner area overlapping the flat-surface area and the bent-surface area, respectively; a first protective film, which is arranged on a surface of the display panel and overlapping the front display area; and a second protective film overlapping at least part of the corner area, where a tensile strength of the second protective film may be less than a tensile strength of the first protective film.
