Provided are a display panel and a display device. The display panel includes a display region and a non-display region at least partially surrounding the display region. The display region includes auxiliary power lines. The non-display region includes a first power main body and a first power bus. The auxiliary power lines are electrically connected to the first power main body through the first power bus. Accordingly, the auxiliary power lines are disposed in the display region and electrically connected to the first power main body through the first power bus disposed in the non-display region. The first power main body is used to supply a power voltage to the auxiliary power lines in the display region through the first power bus.
