(57) **ABSTRACT**

A terminal device displays a selection screen on a display unit of the terminal device for selecting target identification information, the target identification information being for identifying a target printing device which is to execute printing. The selection screen includes M identification information (M being equal to or greater than 1) for identifying M printing devices and N identification information (N being equal to or greater than 1) for identifying N printing devices. Each of the M printing devices is a printing device for which registration of a printing-related predetermined service has been completed, each of the N printing devices is a printing device for which registration of the printing-related predetermined service has not been completed, each of the M identification information has a first display manner, and each of the N identification information has a second display manner different from the first display manner.
