H04L 47/80 (2006.01)

A method for displaying virtual resource information includes: displaying a virtual resource package receivable by a user account and a reservation option, wherein the reservation option is switchable between a selected state and an unselected state, and an activity prompter for the virtual resource package is enabled in response to the reservation option being in the selected state; and outputting prompt information in response to the reservation option being in the selected state and a target activity being started, wherein the prompt information is configured to prompt the user account to use the virtual resource package, and the target activity is at least one of a plurality of activities that allow use of the virtual resource package.

S210

Displaying a virtual resource package receivable by a user account on a current display page, and providing a reservation option to the user account on a current display page, wherein the reservation option is switchable between a selected state and an unselected state, and an activity prompter for the virtual resource package is enabled in response to the reservation option being in the selected state

S220

In the case that the activity prompter for the virtual resource package is enabled in response to the reservation option being in the selected state, outputting prompt information in response to a target activity associated with the virtual resource package being started, such that the user account is prompted to use the virtual resource package, wherein the target activity is at least one of a plurality of activities that allow use of the virtual resource package
