(57) **ABSTRACT**

The embodiments of the disclosure provide a method for pairing devices, an electronic system, and a computer readable storage medium. The method includes: in response to determining a pairing function of a host is triggered, scanning, by the host, for at least one broadcast signal transmitted by at least one electronic device; in response to determining that a first broadcast signal from a first electronic device is scanned, establishing, by the host, a first connection with the first electronic device; providing, by the host, a first operation hint; receiving, by the host, a first operation information from the first electronic device through the first connection; and in response to determining that the first operation information corresponds to the first operation hint, pairing, by the host, with the first electronic device.
