A method performed by a transmitter in a wireless local area
network (WLAN) is provided. The method comprises: set-
ting a second parameter in a second frame based on a first
puncturing pattern indicated by a first parameter in a first
frame for a basic service set (BSS) set up by an access point
(AP); and transmitting, to a receiver, the second frame,
wherein the first puncturing pattern is one of a plurality of
puncturing patterns pre-determined for a third parameter in
a third frame.
