**ABSTRACT**

(72) Inventors: **Ohjune Kwon**, Yongin-si (KR);  
**Seungwook Kwon**, Yongin-si (KR)

A display apparatus includes a substrate including a display area and a peripheral area around the display area, a display element disposed on the substrate in the display area, and a thin-film encapsulation layer covering the display element, where the thin-film encapsulation layer includes a first inorganic encapsulation layer and a second inorganic encapsulation layer disposed on the first inorganic encapsulation layer. An end of one of the first inorganic encapsulation layer and the second inorganic encapsulation layer having a higher surface energy than the other thereof extends further in a direction from the display area toward the peripheral area than an end of the other thereof.
