(57) **ABSTRACT**

A radiation irradiation device includes: a device main body that emits radiation; a display device that is provided in the device main body; a remote operation unit that is capable of remotely operating the device main body; a first wireless communication unit that wirelessly communicates first information including an operation instruction for operating the device main body by using a first wireless communication system, with the remote operation unit; and a second wireless communication unit that wirelessly communicates second information including information to be displayed on the display device by using a second wireless communication system, with an external device provided outside the device main body.
