(57) **ABSTRACT**

This application relates to a data processing method performed by an electronic device. The method includes: receiving a data processing request transmitted by a target device, obtaining contract identification information, description information of target data, operation type information for the target data, and object identification information of the target device carried in the data processing request, searching the blockchain system for a target smart contract corresponding to the contract identification information, and processing the target data in accordance with a processing manner in the target smart contract corresponding to the operation type information, to obtain a data processing result, and returning the data processing result to the target device.
