(57) **ABSTRACT**

A power reception apparatus wirelessly receives power from a power transmission apparatus via a first antenna, communicates with the power transmission apparatus via a second antenna, using a communication packet capable of storing a plurality of control packets that controls wireless power transmission. And The power reception apparatus limits the number of control packets of a specific type to be stored in the communication packet to one or less and does not limit the number of control packets of a type different from the specific type to be stored in the communication packet to one or less.
