A protective structure for input and output ports at least comprises a shell having a top, a first side wall and a second side wall, inside the first side wall is provided with two first side convex ribs, a first limiting groove and a first fixing hole, the second side wall is provided with two second side convex ribs, a second limiting groove and a second fixing hole; and an outer cover with a side formed with a first side guide plate assembled in the first limiting groove and provided with a first side assembling hole communicating with the first fixing hole, another side of the outer cover is formed with a second side guide plate assembled in the second limiting groove and provided with a second side assembling hole communicating with the second fixing hole. Two locking fixtures are used to lock the shell with the outer cover.
