**ABSTRACT**

A communication method includes receiving, by a first terminal device, first information sent by a second terminal device. The first information includes information indicating a second beam selected by the second terminal device. The communication method also includes sending, by the first terminal device, (1) identification information of the second terminal device, or (2) identification information and the first information, to a network device. The first terminal device is a cluster head node, and the second terminal device is a member node of a cluster to which the first terminal device belongs.
