**ABSTRACT**

A method of operating at least one image sensor that records an image content with a recording direction. The method includes the following steps: a) determining at least one piece of information about an expected main direction of movement of an expected movement in at least a portion of an image content to be recorded relative to the image sensor; b) setting the recording direction taking into account the expected main direction of movement; c) recording at least a portion of the image content with the recording direction.
