ABSTRACT

Provided are a generation system and a generation program capable of easily creating a message letter. A server device (2) for generating a message letter displaying a message to a recipient from a plurality of target persons, includes: an acquisition unit (231) acquiring message information from the plurality of target persons, the message information indicating the message to the recipient; and an administration unit (232) generating message letter information indicating the message letter, on the basis of the message information acquired by the acquisition unit (231), in which the acquisition unit (231) performs: first processing of displaying a question for inputting the message as an answer on a side of the plurality of target persons; and second processing of acquiring answer information indicating the answer to the question, the answer being input to the generation system by the plurality of target persons, as the message information.
