**ABSTRACT**

A flexible heater includes a heating module including: a plate-shaped heater; a flexible electrical insulator surrounding the plate-shaped heater; and a flexible sheet surrounding the plate-shaped heater and the electrical insulator. The heating module has a plurality of through-spaces at positions where a heater pattern of the plate-shaped heater is not formed, and a lower sheet and an upper sheet are interconnected in the through-spaces, such that the sheet may maintain its shape without being delaminated even if the shape of the heating module is changed to be curved or bent in order to increase heating efficiency.
