(57) **ABSTRACT**

A universal joint to join inclined sections (2) of a rotating shaft of a solar tracker. The universal joint consists of a crosshead (1) with parts (1.1) perpendicular to each other, two clamps (3) able to be fixed to each inclined section (2) at the ends thereof to be joined, such that each part (1.1) of the crosshead (1) is arranged inside a clamp with freedom of rotation on the plane thereof and at least one side cover (3.2) for each clamp (2) that retains the corresponding part (1.1) of the crosshead (1) perpendicular to the plane.
