A Hybrid Automatic Repeat reQuest ACKnowledgment (HARQ-ACK) processing method, an apparatus, and a related device are provided. The method includes: receiving first indication information sent by a network device, where the first indication information is used to indicate a first operation; and in a case that a first Physical Uplink Control CHannel (PUCCH) overlaps a first uplink resource, performing the first operation. The first PUCCH carries a first HARQ-ACK. The first operation includes any one of the following: that the first HARQ-ACK is not multiplexed to the first uplink resource, that some HARQ-ACK in the first HARQ-ACKs is multiplexed to the first uplink resource, and that all HARQ-ACKs in the first HARQ-ACKs are multiplexed to the first uplink resource.

Receive first indication information sent by a network device, where the first indication information is used to indicate a first operation

201

In a case that a first physical uplink control channel PUCCH overlaps a first uplink resource, perform the first operation
