(57) **ABSTRACT**

A user equipment (UE) and a method of performing transmission in a shared spectrum by the same are provided. The method includes initiating a channel occupancy (CO) and sharing the CO to at least a second UE. This can solve issues in the prior art and provide a method that the CO initiated by the UE can be shared with other one or more UEs, so that the one or more UEs can have higher probability to access a channel, leading to a low latency communication.
