An electronic message visual indicator system comprising:
a gateway computer system in communications with a
message transport system adapted to receive an original
incoming electronic message from a sender message system
prior to the original incoming electronic message extending
into a perimeter of a recipient message system, analyze the
original incoming electronic message according to a set of
warning criteria, add a link to an image that can be placed
in the incoming electronic message to provide a modified
incoming electronic message; and, a recipient message sys-
tem is adapted to receive the modified incoming electronic
message, retrieve an image from an image server according
to the modified incoming electronic message and display the
image providing a n image that can be dynamically changed.
