(57) **ABSTRACT**

A modular data center includes: a modular information technology component (MITC), in which the MITC includes a modular over-rack component (MORC) and a track system, in which the MORC is affixed perpendicularly to the track system, in which the track system permits the MORC to be repositioned along the track system; and a modular environmental control component (MECC), in which the MECC includes a plurality of environmental control components (ECCs) and built-in airflow connection components, in which the built-in airflow connection components remove and supply air to the MITC.
