ABSTRACT

(21) Appl. No.: **18/469,043**

(22) Filed: **Sep. 18, 2023**

An organic light emitting diode display device includes a substrate having a plurality of subpixels. The device includes an overcoat layer on the substrate. The device includes a light emitting diode in each of the plurality of on the overcoat layer. In some embodiments, a top surface of the overcoat layer in adjacent two of the plurality of subpixels includes a plurality of microlenses having different rotation angles. The top surface of the overcoat layer between the adjacent two of the plurality of subpixels includes a slit pattern corresponding to the rotation angles of the plurality of microlenses.
