**ABSTRACT**

A bare-metal connection storage method includes establishing a storage network, where the storage network includes a plurality of bare-metals, an access switch, a core switch, and a storage device. The plurality of bare-metals are coupled to the access switch, the access switch is coupled to the core switch, and the core switch is coupled to the storage device. The method configures the storage network, so that each of the plurality of bare-metals is coupled to the storage device.
