A display panel and a display device are provided. The display panel includes a substrate, a plurality of anodes disposed on a side of the substrate, and one or more reflection compensation structures. The plurality of anodes include a first anode. Along a direction perpendicular to a plane where the substrate is located, the first anode overlaps with a reflection compensation structure of the one or more reflection compensation structures. The reflection compensation structure is disposed on a side of the first anode facing towards the substrate.
