ABSTRACT

A display device with high display quality is provided. A highly reliable display device is provided. A display device with low power consumption is provided. A display device that can easily achieve higher definition is provided. A display device with both high display quality and high definition is provided. A display device with high contrast is provided. The display device includes a first wiring to a fourth wiring and a display portion including a first pixel to a third pixel. The second pixel is positioned between the first pixel and the third pixel in a plan view. Each pixel includes a first subpixel and a second subpixel. The first wiring has a function of applying a first potential to the second subpixel included in the first pixel. The second wiring has a function of applying the first potential to the first subpixel included in the second pixel. The third wiring has a function of applying the first potential to the second subpixel included in the second pixel. The fourth wiring has a function of applying the first potential to the first subpixel included in the third pixel. The first wiring and the second wiring are adjacent to each other. The third wiring and the fourth wiring are adjacent to each other. A distance between the first wiring and the second wiring is shorter than a distance between the third wiring and the fourth wiring.
