ABSTRACT

(21) Appl. No.: **18/173,520**

(22) Filed: **Feb. 23, 2023**

Related U.S. Application Data

(63) Continuation of application No. 17/383,856, filed on
Jul. 23, 2021, now Pat. No. 11,611,929, which is a
continuation of application No. 16/325,088, filed on
Feb. 12, 2019, now Pat. No. 11,115,908, filed as
application No. PCT/CN2016/095042 on Aug. 12,
2016.

Publication Classification

(51) **Int. Cl.**

H04W 48/14 (2006.01)

H04W 76/18 (2006.01)

A network slice selection method, a radio access device, and a terminal, where the method includes obtaining, by a radio access network (RAN) device, network slice information, sending, by the RAN device, a first message to a terminal, where the first message includes the network slice information, receiving, by the RAN device, a first access request message from the terminal after the terminal selects, based on the network slice information, first attribute information of a first network slice to be accessed by the terminal, and selecting, by the RAN device based on the first attribute information of the first network slice, a second network slice to be accessed by the terminal. The method enables an operator to flexibly configure a network slice, and reduces a communication latency and signaling overheads in a process in which a terminal selects a network slice.
