(57) **ABSTRACT**

An information processing system includes: a server including a first processor configured to function as a virtual device that is provided on a one-to-one basis with a predetermined information processing apparatus and mediates exchange of information between an application and the information processing apparatus; the information processing apparatus including a second processor, in a case of exchanging predetermined confidential information with the application via the virtual device, the second processor configured to exchange the information by converting the information into a format in which the information is to be referred to by the information processing apparatus and the application and is not to be referred to by the virtual device; and an information processing terminal including a third processor configured to function as the application, and exchange the information by converting the information into a format in which the information is to be referred to by the information processing terminal and the application and is not to be referred to by the virtual device, in a case of exchanging the confidential information with the information processing apparatus via the virtual device.
