#### (57)**ABSTRACT**

Disclosed are a light emitting device, a light emitting package and a backlight unit including the same. A light emitting device emitting light in a blue wavelength band may include a light generation layer and an electrode. The light generation layer may include a first semiconductor layer, a second semiconductor layer, and an active layer formed between the first semiconductor layer and the second semiconductor layer. The electrode may include a first electrode electrically connected to the first semiconductor layer and a second electrode electrically connected to the second semiconductor layer. Here, for the light emitting device, the quantity of light in a desaturation band may be lower than the quantity of light in other wavelength bands.
