(57)**ABSTRACT**

According to one embodiment, a display device includes a plurality of pixels including at least a first pixel and a second pixel, each of the plurality of pixels comprising an anode including a reflective electrode and a transparent electrode, an organic EL layer provided on the anode, wherein a first anode of the first pixel includes a first reflective electrode and a first transparent electrode, a second anode of the second pixel includes a second reflective electrode and a second transparent electrode, an end portion of the first reflective electrode and an end portion of the first transparent electrode coincide with each other, and the second transparent electrode covers the second reflective electrode.
