(57)ABSTRACT

A light emitting element includes a first electrode, a second electrode on the first electrode, and at least one functional layer between the first electrode and the second electrode and including an amine compound including a aryl/heteroaryl group, an α -naphthyl group in which an aryl group is substituted at position 2 of the α -naphthyl group, and a β-naphthyl group, each of which is directly or indirectly connected with the nitrogen atom of the amine.
