(57)ABSTRACT

A wireless communication method includes: a terminal device determining, according to first information, a target transport block size of a transport block to be sent. The first information is associated with acquiring energy by the terminal device through power harvesting, and the energy is used by the terminal device for communication.

200

A terminal device determines a target Transport Block Size (TBS) of a transport block to be sent according to first information, where the first information is associated with acquiring energy by the terminal device through power harvesting
