ABSTRACT (57)

Disclosed are a method and an apparatus for configuring relay communication information, and an electronic device, and pertains to the field of communication technologies. The method for configuring relay communication information includes: reporting, by a terminal, a relay communication mode to a network-side device; and receiving, by the terminal, relay communication information from the networkside device, where the relay communication information includes a relay communication policy and/or authorization parameter corresponding to the relay communication mode.

A terminal reports a relay communication mode to a network-side device

The terminal receives relay communication information from the network-side device, where the relay communication information includes a relay communication policy and/or authorization parameter corresponding to the relay communication mode
