(57)ABSTRACT

A method for determining a HARQ-ACK transmission resource includes determining, by a terminal, a first HARQ-ACK transmission resource based on a first subcarrier spacing and a first carrier; in a case of determining that the first HARQ-ACK transmission resource is unavailable, determining, by the terminal, a second HARQ-ACK transmission resource after a first HARQ-ACK feedback time based on the first subcarrier spacing and the first carrier, or determining a third HARQ-ACK transmission resource after the first HARQ-ACK feedback time based on a second subcarrier spacing and a second carrier, where the first HARQ-ACK feedback time is determined based on the first subcarrier spacing or based on the first subcarrier spacing and the first carrier.

A terminal determines a first HARQ-ACK transmission resource based on a first subcarrier spacing SCS and a first carrier

201

In a case of determining that the first HARQ-ACK transmission resource is unavailable, the terminal determines a second HARQ-ACK transmission resource after a first HARQ-ACK feedback time based on the first subcarrier spacing SCS and the first carrier, or determines a third HARQ-ACK transmission resource after the first HARQ-ACK feedback time based on a second subcarrier spacing SCS and a second carrier
