(57)ABSTRACT

A display device includes a base layer, a circuit layer disposed on the base layer, an anode disposed on the circuit layer, a pixel defining layer disposed on the circuit layer, where a light emitting opening is defined in the pixel defining layer to overlap the anode, a barrier wall disposed on the pixel defining layer, where a barrier opening is defined in the barrier wall to overlap the light emitting opening, a thin film encapsulation layer disposed over the circuit layer to cover the anode, the pixel defining layer, and the barrier wall, and a plurality of touch electrodes disposed between the circuit layer and the thin film encapsulation
