#### (57)**ABSTRACT**

This disclosure provides systems, methods, and apparatuses, including computer programs encoded on computer storage media, for wireless communication. In one aspect of the disclosure, a method of wireless communication performed by a user equipment (UE) includes performing one or more cross-link interference (CLI) measurements on each of multiple ports to determine a plurality of measurement values for the multiple ports. The method also includes transmitting a CLI measurement report based on the plurality of measurement values.
