#### ABSTRACT (57)

A terminal protection network, which comprises one or more terminal protection circuits (204, 206, 208), each having at least two terminals (T1, T2) connected respectively to at least two of three terminals (T1, T2, T3) of a primary component (202) in the electronic device; and one or more clamping circuits (240\_1, ..., 240\_N), each having two terminals (T1, T2) connected respectively to the primary component (202) and a corresponding auxiliary component (220\_1, ..., 220\_N) in the electronic device.
