#### (57)ABSTRACT

An electronic device includes: a display including: a folding area to be folded during a folding operation; and a first area and a second area at opposite sides with respect to a folding area extending in a first direction; a protective layer above the display, and including a first edge located around the first area, and a second edge located around the second area; and a first housing decoration corresponding to the first area and covering an upper surface of the first edge, the first housing decoration having an inner side surface in which a first groove is located. An inner circumferential surface of the first groove includes a first-1 inner circumferential surface facing the upper surface of the first edge, the first-1 inner circumferential surface being upwardly inclined with respect to a direction parallel to the first area, and the first edge is located in the first groove.
