#### (57)ABSTRACT

A display device includes a display module that includes a display panel including a display area and a non-display area and a light control layer disposed on the display panel, a step difference compensation layer that overlaps the non-display area, is disposed on the display module, and compensates for a step difference in the non-display area, and a window disposed on the display module. The window includes a light shielding layer overlapping the non-display area and a window coating layer.
