ABSTRACT (57)

A display panel and a display device are provided. The display panel includes a substrate, and sensing elements and at least one light-emitting element that are located at a side of the substrate. The sensing elements include at least one first sensing element each configured to recognize fingerprint, and further comprises at least one second sensing element and/or at least one third sensing element. The at least one second sensing element each is configured to detect color temperature of ambient light. The at least one third sensing element each is configured to monitor a lifetime of one of the at least one light-emitting element.
