ABSTRACT (57)

The e-vaping element includes a reservoir configured to hold a liquid aerosol-forming substrate, a heater configured to receive the liquid aerosol-forming substrate from the reservoir, one or more capillary wicks configured to transfer the liquid aerosol-forming substrate from the reservoir to the heater, and a first temperature sensor configured to sense at least one first temperature of the liquid aerosol-forming substrate held in the reservoir, the first temperature sensor and the heater being spaced apart from each other and being on opposite ends of the reservoir.
