(57)ABSTRACT

A light emitting display apparatus includes a plurality of pixels each including a plurality of subpixels, a plurality of data lines respectively connected with the plurality of subpixels, and a plurality of reference lines in each of the plurality of pixels. Each of the plurality of subpixels includes a pixel circuit connected with a corresponding data line and a corresponding reference line and a light emitting device layer connected with the pixel circuit. A first subpixel group among the plurality of subpixels in each of the plurality of pixels is connected with a corresponding reference line, and a second subpixel group except the first subpixel group among the plurality of subpixels in each of the plurality of pixels is connected with a reference line connected with an adjacent different pixel.
